

Comprehensive Planning

Planning for your municipality's future

Growth pressures gettin' you down?? ...maybe Casino's? Pipelines? Strip Malls? Residential Developments? Then this workshop should help! It is designed to assist municipal officials and the public in understanding the benefits and tools available in developing and implementing your current or future municipal or multi-municipal Comprehensive Plan.

Workshop Outline

Are zoning and development issues causing controversy in your community? As officials plan for growth, do the developers and public fight it? Are neighboring communities facing the same concerns and challenges?

To manage growth, municipal officials in Pennsylvania and New York towns and townships need to balance the needs of the community and the realities of issues such as economic development, agriculture preservation, open space conservation and sprawl. You can utilize your comprehensive plan to take the next step toward realizing your community's goals. Reaching your goals requires an understanding of the land use tools available and how to make them work.

This workshop is designed to explain the benefits of Comprehensive Plans and multi-municipal partnerships as well as several land use tools that can be implemented once identified in a comprehensive plan. Perspectives on a few successful strategies will also be provided. You will learn why they have been successful and how your community may be able to make them work. Instructors for this workshop are Policy Specialists with extensive experience in Land Planning issues in both NY and PA.
